PORR

Perfectly coordinated.

The coordination between the advance performance of the customer and completion by ÖBA was a particular challenge.

The large construction area also made it necessary to efficiently coordinate the internal construction site reorganisations. Due to the severely constricted construction time, the teams generally worked with two recyclers simultaneously.

Impressions

Image notes

1

Complex construction site organisation.

For the organisation of the construction sites, the logistics of the construction machines had to be perfectly coordinated, among other things.

2

Full performance in action.

To comply with the tight schedule for this project, ÖBA relied on the simultaneous use of two recyclers.
